Product datasheet for TA805993S

Factor XIII (F13B) Mouse Monoclonal Antibody [Clone ID: OTI2H10]

Product data:

Product Type:	Primary Antibodies	
Clone Name:	OTI2H10	
Applications:	WB	
Recommended Dilution:	WB 1:200	
Reactivity:	Human	
Host:	Mouse	
lsotype:	lgG1	
Clonality:	Monoclonal	
Immunogen:	Human recombinant protein fragment corresponding to amino acids 357-661 of human F13B(NP_001985) produced in E.coli.	
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.	
Concentration:	1 mg/ml	
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)	
Conjugation:	Unconjugated	
Storage:	Store at -20°C as received.	
Stability:	Stable for 12 months from date of receipt.	
Predicted Protein Size:	73.2 kDa	
Gene Name:	coagulation factor XIII B chain	
Database Link:	<u>NP_001985</u> <u>Entrez Gene 2165 Human</u> <u>P05160</u>	

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

Sactor XIII (F13B) Mouse Monoclonal Antibody [Clone ID: OTI2H10] – TA805993S

Background:This gene encodes coagulation factor XIII B subunit. Coagulation factor XIII is the last
zymogen to become activated in the blood coagulation cascade. Plasma factor XIII is a
heterotetramer composed of 2 A subunits and 2 B subunits. The A subunits have catalytic
function, and the B subunits do not have enzymatic activity and may serve as a plasma carrier
molecules. Platelet factor XIII is comprised only of 2 A subunits, which are identical to those
of plasma origin. Upon activation by the cleavage of the activation peptide by thrombin and
in the presence of calcium ion, the plasma factor XIII dissociates its B subunits and yields the
same active enzyme, factor XIIIa, as platelet factor XIII. This enzyme acts as a
transglutaminase to catalyze the formation of gamma-glutamyl-epsilon-lysine crosslinking
between fibrin molecules, thus stabilizing the fibrin clot. Factor XIII deficiency is classified into
two categories: type I deficiency, characterized by the lack of both the A and B subunits; and
type II deficiency, characterized by the lack of the A subunit alone. These defects can result in
a lifelong bleeding tendency, defective wound healing, and habitual abortion. [provided by
RefSeq, Jul

Synonyms:	FXIIIB
Protein Families:	Druggable Genome
Protein Pathways:	Complement and coagulation cascades

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY F13B ([RC219609], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-F13B. Positive lysates [LY419598] (100ug) and [LC419598] (20ug) can be purchased separately from OriGene.
