Serigene Lipin 1 (LPIN1) Mouse Monoclonal Antibody [Clone ID: OTI7F5] – TA806141

Background:This gene encodes a magnesium-ion-dependent phosphatidic acid phosphohydrolase
enzyme that catalyzes the penultimate step in triglyceride synthesis including the
dephosphorylation of phosphatidic acid to yield diacylglycerol. Expression of this gene is
required for adipocyte differentiation and it also functions as a nuclear transcriptional
coactivator with some peroxisome proliferator-activated receptors to modulate expression of
other genes involved in lipid metabolism. Mutations in this gene are associated with
metabolic syndrome, type 2 diabetes, and autosomal recessive acute recurrent
myoglobinuria (ARARM). This gene is also a candidate for several human lipodystrophy
syndromes. Alternative splicing results in multiple transcript variants encoding distinct
isoforms. Additional splice variants have been described but their full-length structures have
not been determined. [provided by RefSeq, May 2012]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY LPIN1 ([RC207138], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-LPIN1 (1:2000). Positive lysates [LY407897] (100ug) and [LC407897] (20ug) can be purchased separately from OriGene.
