# Product datasheet for TA806187S

# Glucocorticoid Receptor (NR3C1) Mouse Monoclonal Antibody [Clone ID: OTI2C4]

### **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI2C4
Applications:	IHC, WB
Recommended Dilution:	WB 1:2000, IHC 1:150
Reactivity:	Human, Mouse, Rat
Host:	Mouse
lsotype:	lgG2b
Clonality:	Monoclonal
Immunogen:	Human recombinant protein fragment corresponding to amino acids 1-265 of human NR3C1(NP_000167) produced in E.coli.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	1 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	85.5 kDa
Gene Name:	nuclear receptor subfamily 3 group C member 1
Database Link:	<u>NP_000167</u> <u>Entrez Gene 14815 MouseEntrez Gene 24413 RatEntrez Gene 2908 Human</u> <u>P04150</u>

	Glucocorticoid Receptor (NR3C1) Mouse Monoclonal Antibody [Clone ID: OTI2C4] – TA806187S
Background:	This gene encodes glucocorticoid receptor, which can function both as a transcription factor that binds to glucocorticoid response elements in the promoters of glucocorticoid responsive genes to activate their transcription, and as a regulator of other transcription factors. This receptor is typically found in the cytoplasm, but upon ligand binding, is transported into the nucleus. It is involved in inflammatory responses, cellular proliferation, and differentiation in target tissues. Mutations in this gene are associated with generalized glucocorticoid resistance. Alternative splicing of this gene results in transcript variants encoding either the same or different isoforms. Additional isoforms resulting from the use of alternate in-frame translation initiation sites have also been described, and shown to be functional, displaying diverse cytoplasm-to-nucleus trafficking patterns and distinct transcriptional activities (PMID:15866175). [provided by RefSeq, Feb 2011]
Synonyms:	GCCR; GCR; GCRST; GR; GRL
Protein Families	: Druggable Genome, Nuclear Hormone Receptor, Transcription Factors

Protein Pathways: Neuroactive ligand-receptor interaction

## **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY NR3C1 ([RC220189], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-NR3C1. Positive lysates [LY424874] (100ug) and [LC424874] (20ug) can be purchased separately from OriGene.

15 — 10 — Western blot analysis of extracts (35ug) from 3 different cell lines by using anti-NR3C1 monoclonal antibody (1:500).

Immunohistochemical staining of paraffinembedded Human lymph node tissue within the normal limits using anti-NR3C1 mouse monoclonal antibody. (Heat-induced epitope retrieval by 1mM EDTA in 10mM Tris, pH8.5, 120°C for 3min, [TA806187])
