Background: This gene encodes a cytoskeletal protein found in neurons of the peripheral nervous system.

The encoded protein is a type III intermediate filament protein with homology to other cytoskeletal proteins such as desmin, and is a different protein that the peripherin found in

photoreceptors. Mutations in this gene have been associated with susceptibility to

amyotrophic lateral sclerosis. [provided by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PRPH ([RC207561], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PRPH. Positive lysates [LY401885] (100ug) and [LC401885] (20ug) can be purchased separately from OriGene.
