	Retinoic Acid Receptor alpha (RARA) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI2D5] – TA806242AM
Background:	This gene represents a nuclear retinoic acid receptor. The encoded protein, retinoic acid receptor alpha, regulates transcription in a ligand-dependent manner. This gene has been implicated in regulation of development, differentiation, apoptosis, granulopoeisis, and transcription of clock genes. Translocations between this locus and several other loci have been associated with acute promyelocytic leukemia. Alternatively spliced transcript variants have been found for this locus. [provided by RefSeq, Sep 2010]
Synonyms:	NR1B1; RAR
Protein Families	Druggable Genome, Nuclear Hormone Receptor, Transcription Factors
Protein Pathway	s: Acute myeloid leukemia, Pathways in cancer

### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY RARA ([RC200430], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-RARA. Positive lysates [LY400350] (100ug) and [LC400350] (20ug) can be purchased separately from OriGene.
