	ANGPTL1 Mouse Monoclonal Antibody [Clone ID: OTI9E5] – TA806289S
Background:	Angiopoietins are members of the vascular endothelial growth factor family and the only known growth factors largely specific for vascular endothelium. Angiopoietin-1, angiopoietin- 2, and angiopoietin-4 participate in the formation of blood vessels. The protein encoded by this gene is another member of the angiopoietin family that is widely expressed in adult tissues with mRNA levels highest in highly vascularized tissues. This protein was found to be a secretory protein that does not act as an endothelial cell mitogen in vitro. [provided by RefSeq, Jul 2008]
Synonyms:	ANG3; ANGPT3; AngY; ARP1; dJ595C2.2; UNQ162
<b>Protein Families</b>	: Druggable Genome, Secreted Protein

## **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY ANGPTL1 ([RC208671], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-ANGPTL1. Positive lysates [LY401482] (100ug) and [LC401482] (20ug) can be purchased separately from OriGene.
