Entrez Gene 1435 Human

P09603

Background: The protein encoded by this gene is a cytokine that controls the production, differentiation,

and function of macrophages. The active form of the protein is found extracellularly as a disulfide-linked homodimer, and is thought to be produced by proteolytic cleavage of membrane-bound precursors. The encoded protein may be involved in development of the placenta. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Sep

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CSF1 ([RC217104], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CSF1. Positive lysates [LY424534] (100ug) and [LC424534] (20ug) can be purchased separately from OriGene.
