

# Product datasheet for TA806970M

## ABAT Mouse Monoclonal Antibody [Clone ID: OTI4A10]

#### **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI4A10
Applications:	IHC, WB
Recommended Dilution:	WB 1:2000, IHC 1:150
Reactivity:	Human, Mouse, Rat
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Human recombinant protein fragment corresponding to amino acids 29-323 of human ABAT(NP_065737) produced in E.coli.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	1 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	53.2 kDa
Gene Name:	4-aminobutyrate aminotransferase
Database Link:	<u>NP_065737</u> <u>Entrez Gene 81632 RatEntrez Gene 268860 MouseEntrez Gene 18 Human</u> <u>P80404</u>

	ABAT Mouse Monoclonal Antibody [Clone ID: OTI4A10] – TA806970M
Background:	4-aminobutyrate aminotransferase (ABAT) is responsible for catabolism of gamma- aminobutyric acid (GABA), an important, mostly inhibitory neurotransmitter in the central nervous system, into succinic semialdehyde. The active enzyme is a homodimer of 50-kD subunits complexed to pyridoxal-5-phosphate. The protein sequence is over 95% similar to the pig protein. GABA is estimated to be present in nearly one-third of human synapses. ABAT in liver and brain is controlled by 2 codominant alleles with a frequency in a Caucasian population of 0.56 and 0.44. The ABAT deficiency phenotype includes psychomotor retardation, hypotonia, hyperreflexia, lethargy, refractory seizures, and EEG abnormalities. Multiple alternatively spliced transcript variants encoding the same protein isoform have been found for this gene. [provided by RefSeq, Jul 2008]
Synonyms:	GABA-AT; GABAT; NPD009
Protein Families:	Druggable Genome
Protein Pathway	<b>s:</b> Alanine, aspartate and glutamate metabolism, beta-Alanine metabolism, Butanoate metabolism, Metabolic pathways, Propanoate metabolism, Valine, leucine and isoleucine degradation

### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY ABAT ([RC218980], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-ABAT. Positive lysates [LY412383] (100ug) and [LC412383] (20ug) can be purchased separately from OriGene.
