# Product datasheet for TA807104S

### Renin (REN) Mouse Monoclonal Antibody [Clone ID: OTI4A3]

#### **Product data:**

| Product Type:           | Primary Antibodies   |  |
|-------------------------|--|--|
| Clone Name:             | OTI4A3   |  |
| Applications:           | WB   |  |
| Recommended Dilution:   | WB 1:500   |  |
| Reactivity:             | Human  |  |
| Host:                   | Mouse  |  |
| lsotype:                | lgG1   |  |
| Clonality:              | Monoclonal   |  |
| Immunogen:              | Human recombinant protein fragment corresponding to amino acids 131-406 of human<br>REN(NP_000528) produced in E.coli. |  |
| Formulation:            | PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.   |  |
| Concentration:          | 1 mg/ml  |  |
| Purification:           | Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography<br>(protein A/G)           |  |
| Conjugation:            | Unconjugated   |  |
| Storage:                | Store at -20°C as received.  |  |
| Stability:              | Stable for 12 months from date of receipt.   |  |
| Predicted Protein Size: | 42.3 kDa   |  |
| Gene Name:              | renin  |  |
| Database Link:          | <u>NP_000528</u><br><u>Entrez Gene 5972 Human</u><br><u>P00797</u>   |  |

|                  | (REN) Mouse Monoclonal Antibody [Clone ID: OTI4A3] – TA807104S   |  |  |
|------------------|--|--|--|
| Background:      | Renin catalyzes the first step in the activation pathway of angiotensinogena cascade that<br>can result in aldosterone release,vasoconstriction, and increase in blood pressure. Renin, an<br>aspartyl protease, cleaves angiotensinogen to form angiotensin I, which is converted to<br>angiotensin II by angiotensin I converting enzyme, an important regulator of blood pressure<br>and electrolyte balance. Transcript variants that encode different protein isoforms and that<br>arise from alternative splicing and the use of alternative promoters have been described, but<br>their full-length nature has not been determined. Mutations in this gene have been shown to<br>cause familial hyperproreninemia. [provided by RefSeq, Jul 2008] |  |  |
| Synonyms:        | ADTKD4; HNFJ2; RTD   |  |  |
| Protein Families | Druggable Genome, Secreted Protein   |  |  |
| Protein Pathway  | Renin-angiotensin system   |  |  |

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY REN ([RC208382], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-REN (1:500). Positive lysates [LY424660] (100ug) and [LC424660] (20ug) can be purchased separately from OriGene.
