PAPSS2 Mouse Monoclonal Antibody [Clone ID: OTI7E8] - TA807112M

Background: Sulfation is a common modification of endogenous (lipids, proteins, and carbohydrates) and

exogenous (xenobiotics and drugs) compounds. In mammals, the sulfate source is 3'-phosphoadenosine 5'-phosphosulfate (PAPS), created from ATP and inorganic sulfate. Two different tissue isoforms encoded by different genes synthesize PAPS. This gene encodes one

of the two PAPS synthetases. Defects in this gene cause the Pakistani type of

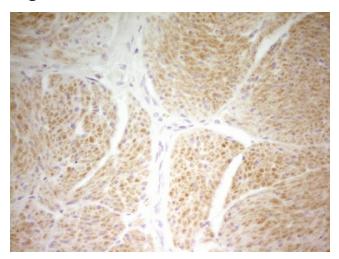

spondyloepimetaphyseal dysplasia. Two alternatively spliced transcript variants that encode

different isoforms have been described for this gene. [provided by RefSeq, Jul 2008]

Synonyms: ATPSK2; BCYM4; SK2
Protein Families: Druggable Genome

Protein Pathways: Metabolic pathways, Purine metabolism, Selenoamino acid metabolism, Sulfur metabolism
