### Granulin (GRN) Mouse Monoclonal Antibody [Clone ID: OTI3B3] – TA807351

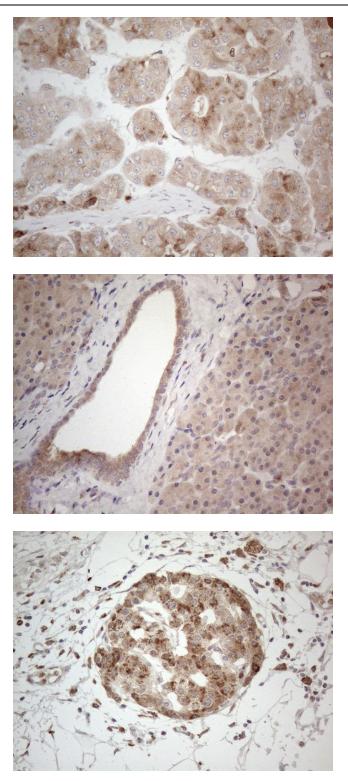

Background:Granulins are a family of secreted, glycosylated peptides that are cleaved from a single<br/>precursor protein with 7.5 repeats of a highly conserved 12-cysteine granulin/epithelin motif.<br/>The 88 kDa precursor protein, progranulin, is also called proepithelin and PC cell-derived<br/>growth factor. Cleavage of the signal peptide produces mature granulin which can be further<br/>cleaved into a variety of active, 6 kDa peptides. These smaller cleavage products are named<br/>granulin A, granulin B, granulin C, etc. Epithelins 1 and 2 are synonymous with granulins A<br/>and B, respectively. Both the peptides and intact granulin protein regulate cell growth.<br/>However, different members of the granulin protein family may act as inhibitors, stimulators,<br/>or have dual actions on cell growth. Granulin family members are important in normal<br/>development, wound healing, and tumorigenesis. [provided by RefSeq, Jul 2008]
