MF Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI3E5] - TA807460AMBackground:The protein encoded by this gene belongs to the BCL2 protein family. BCL2 family members
form hetero- or homodimers and act as anti- or pro-apoptotic regulators that are involved in
a wide variety of cellular activities. This protein contains a single BCL2 homology domain 3
(BH3), and has been shown to bind BCL2 proteins and function as an apoptotic activator. This
protein is found to be sequestered to myosin V motors by its association with dynein light
chain 2, which may be important for sensing intracellular damage and triggering apoptosis.
Alternatively spliced transcript variants encoding different isoforms have been identified.

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY BMF ([RC209733], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-BMF. Positive lysates [LY424040] (100ug) and [LC424040] (20ug) can be purchased separately from OriGene.
