|             | BMF Mouse Monoclonal Antibody [Clone ID: OTI9B7] – TA807461S  |
|-------------|---|
| Background: | The protein encoded by this gene belongs to the BCL2 protein family. BCL2 family members<br>form hetero- or homodimers and act as anti- or pro-apoptotic regulators that are involved in<br>a wide variety of cellular activities. This protein contains a single BCL2 homology domain 3<br>(BH3), and has been shown to bind BCL2 proteins and function as an apoptotic activator. This<br>protein is found to be sequestered to myosin V motors by its association with dynein light<br>chain 2, which may be important for sensing intracellular damage and triggering apoptosis.<br>Alternatively spliced transcript variants encoding different isoforms have been identified.<br>[provided by RefSeq, Jul 2008] |

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY BMF (Cat# [RC209733], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-BMF (Cat# [TA807461])(1:2000). Positive lysates [LY424040] (100ug) and [LC424040] (20ug) can be purchased separately from OriGene.
