	IGFBP3 Mouse Monoclonal Antibody [Clone ID: OTI8E11] – TA807472M
Background:	This gene is a member of the insulin-like growth factor binding protein (IGFBP) family and encodes a protein with an IGFBP domain and a thyroglobulin type-I domain. The protein forms a ternary complex with insulin-like growth factor acid-labile subunit (IGFALS) and either insulin-like growth factor (IGF) I or II. In this form, it circulates in the plasma, prolonging the half-life of IGFs and altering their interaction with cell surface receptors. Alternate transcriptional splice variants, encoding different isoforms, have been characterized. [provided by RefSeq, Jul 2008]
Synonyms:	BP-53; IBP3
Protein Families:	Druggable Genome, Secreted Protein
Protein Pathway	s: p53 signaling pathway

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY IGFBP3 ([RC216898], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-IGFBP3. Positive lysates [LY422966] (100ug) and [LC422966] (20ug) can be purchased separately from OriGene.
