# MEF2D Mouse Monoclonal Antibody [Clone ID: OTI3D12] - TA8075575Background:This gene is a member of the myocyte-specific enhancer factor 2 (MEF2) family of<br/>transcription factors. Members of this family are involved in control of muscle and neuronal<br/>cell differentiation and development, and are regulated by class II histone deacetylases.<br/>Fusions of the encoded protein with Deleted in Azoospermia-Associated Protein 1 (DAZAP1)<br/>due to a translocation have been found in an acute lymphoblastic leukemia cell line,<br/>suggesting a role in leukemogenesis. The encoded protein may also be involved in Parkinson<br/>disease and myotonic dystrophy. Alternative splicing results in multiple transcript variants.<br/>[provided by RefSeq, Oct 2012]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY MEF2D ([RC208748], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-MEF2D. Positive lysates [LY416984] (100ug) and [LC416984] (20ug) can be purchased separately from OriGene.
