#### CRIGENE TCEAL1 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI2A1] – TA807708AM

Background:This gene encodes a member of the transcription elongation factor A (SII)-like (TCEAL) gene<br/>family. Members of this family may function as nuclear phosphoproteins that modulate<br/>transcription in a promoter context-dependent manner. The encoded protein is similar to<br/>transcription elongation factor A/transcription factor SII and contains a zinc finger-like motif<br/>as well as a sequence related to the transcription factor SII Pol II-binding region. It may exert<br/>its effects via protein-protein interactions with other transcriptional regulators rather than via<br/>direct binding of DNA. Multiple family members are located on the X chromosome.<br/>Alternative splicing results in multiple transcript variants encoding a single isoform. [provided<br/>by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY TCEAL1 ([RC219873], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-TCEAL1 (1:2000). Positive lysates [LY417752] (100ug) and [LC417752] (20ug) can be purchased separately from OriGene.
