	ATP dependent metalloprotease YME1L1 (YME1L1) Mouse Monoclonal Antibody [Clone ID: OTI4E3] – TA808146M
Background:	The protein encoded by this gene is the human ortholog of yeast mitochondrial AAA metalloprotease, Yme1p. It is localized in the mitochondria and can functionally complement a yme1 disruptant yeast strain. It is proposed that this gene plays a role in mitochondrial protein metabolism and could be involved in mitochondrial pathologies. Three transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Dec 2011]

Synonyms: FTSH, MEG4, PAMP, YME1L

Protein Families: Druggable Genome, Protease

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY YME1L1 ([RC203167], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-YME1L1 (1:2000). Positive lysates [LY408345] (100ug) and [LC408345] (20ug) can be purchased separately from OriGene.
