Serigene MRPS15 Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI6D2] – TA808238BM

Background:Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in
protein synthesis within the mitochondrion. Mitochondrial ribosomes (mitoribosomes)
consist of a small 28S subunit and a large 39S subunit. They have an estimated 75% protein
to rRNA composition compared to prokaryotic ribosomes, where this ratio is reversed.
Another difference between mammalian mitoribosomes and prokaryotic ribosomes is that
the latter contain a 5S rRNA. Among different species, the proteins comprising the
mitoribosome differ greatly in sequence, and sometimes in biochemical properties, which
prevents easy recognition by sequence homology. This gene encodes a 28S subunit protein
that belongs to the ribosomal protein S15P family. The encoded protein is more than two
times the size of its E. coli counterpart, with the 12S rRNA binding sites conserved. Between
human and mouse, the encoded protein is the least conserved among small subunit
ribosomal proteins. Pseudogenes corresponding to this gene are found on chromosomes 15q
and 19q. [provided by RefSeq, Jul 2008]

Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY MRPS15 ([RC207694], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-MRPS15 (1:2000). Positive lysates [LY410616] (100ug) and [LC410616] (20ug) can be purchased separately from OriGene.
