# Product datasheet for TA808279AM

## ATP6V1C2 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI5C4]

### **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI5C4
Applications:	WB
Recommended Dilution:	WB 1:2000
Reactivity:	Human, Mouse, Rat
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Full length human recombinant protein of human ATP6V1C2(NP_653184) produced in E.coli.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	0.5 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Biotin
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	43.7 kDa
Gene Name:	ATPase H+ transporting V1 subunit C2
Database Link:	<u>NP_653184</u> <u>Entrez Gene 68775 MouseEntrez Gene 362802 RatEntrez Gene 245973 Human Q8NEY4</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

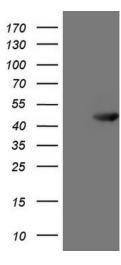

#### CRIGENE ATP6V1C2 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI5C4] – TA808279AM

Background:This gene encodes a component of vacuolar ATPase (V-ATPase), a multisubunit enzyme that<br/>mediates acidification of eukaryotic intracellular organelles. V-ATPase dependent organelle<br/>acidification is necessary for such intracellular processes as protein sorting, zymogen<br/>activation, receptor-mediated endocytosis, and synaptic vesicle proton gradient generation.<br/>V-ATPase is composed of a cytosolic V1 domain and a transmembrane V0 domain. The V1<br/>domain consists of three A,three B, and two G subunits, as well as a C, D, E, F, and H subunit.<br/>The V1 domain contains the ATP catalytic site. This gene encodes alternate transcriptional<br/>splice variants, encoding different V1 domain C subunit isoforms. [provided by RefSeq, Jul<br/>2008]

# Synonyms: ATP6C2; VMA5

**Protein Pathways:** Epithelial cell signaling in Helicobacter pylori infection, Metabolic pathways, Oxidative phosphorylation, Vibrio cholerae infection

#### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY ATP6V1C2 ([RC204218], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-ATP6V1C2 (1:2000). Positive lysates [LY408291] (100ug) and [LC408291] (20ug) can be purchased separately from OriGene.
