Service AMACR Mouse Monoclonal Antibody [Clone ID: OTI6C7] – TA808493S

| Background: | This gene encodes a racemase. The encoded enzyme interconverts pristanoyl-CoA and C27- |
|-------------|--|
| | bile acylCoAs between their (R)- and (S)-stereoisomers. The conversion to the (S)- |
| | stereoisomers is necessary for degradation of these substrates by peroxisomal beta- |
| | oxidation. Encoded proteins from this locus localize to both mitochondria and peroxisomes. |
| | Mutations in this gene may be associated with adult-onset sensorimotor neuropathy, |
| | pigmentary retinopathy, and adrenomyeloneuropathy due to defects in bile acid synthesis. |
| | Alternatively spliced transcript variants have been described. Read-through transcription also |
| | exists between this gene and the upstream neighboring C1QTNF3 (C1q and tumor necrosis |
| | factor related protein 3) gene. [provided by RefSeq, Mar 2011] |

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY AMACR ([RC213437], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-AMACR (1:2000). Positive lysates [LY402314] (100ug) and [LC402314] (20ug) can be purchased separately from OriGene.
