| Background:             | Poly(ADP-ribose) glycohydrolase (PARG) is the major enzyme responsible for the catabolism<br>of poly(ADP-ribose), a reversible covalent-modifier of chromosomal proteins. The protein is<br>found in many tissues and may be subject to proteolysis generating smaller, active products.<br>[provided by RefSeq, Jul 2008] |

### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PARG ([RC208530], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PARG (1:2000). Positive lysates [LY418533] (100ug) and [LC418533] (20ug) can be purchased separately from OriGene.
