Background:	This gene encodes twinfilin, an actin monomer-binding protein conserved from yeast to mammals. Studies of the mouse counterpart suggest that this protein may be an actin monomer-binding protein, and its localization to cortical G-actin-rich structures may be regulated by the small GTPase RAC1. HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY TWF1 ([RC207215], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-TWF1 (1:2000). Positive lysates [LY401004] (100ug) and [LC401004] (20ug) can be purchased separately from OriGene.

Equivalent amounts of cell lysates (10 ug per lane) of wild-type HeLa cells (WT, Cat# LC810HELA) and TWF1-Knockout HeLa cells (KO, Cat# [LC832145]) were separated by SDS-PAGE and immunoblotted with anti-TWF1 monoclonal antibody [TA808861] (1:2000). Then the blotted membrane was stripped and reprobed with anti-HSP90 antibody as a loading control.
