Background:	This gene encodes a protein which contains two sets of heptad repeats in the N-terminus; the C-terminal most repeats form a leucine zipper domain. The presence of a leucine zipper domain suggests the protein may have DNA-binding activity and the protein has been shown to localize with a spliceosome protein (PMID: 12032826). Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY LUZP4 ([RC215624], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-LUZP4 (1:2000). Positive lysates [LY413991] (100ug) and [LC413991] (20ug) can be purchased separately from OriGene.
