Product datasheet for TA809117BM

Alkaline Phosphatase (ALPL) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI3A1]

Product data:

Product Type:	Primary Antibodies
Clone Name:	OTI3A1
Applications:	WB
Recommended Dilution:	WB 1:2000
Reactivity:	Human, Mouse, Rat
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Full length human recombinant protein of human ALPL (NP_000469) produced in HEK293T cell.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol.
Concentration:	0.5 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	HRP
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	57.3 kDa
Gene Name:	alkaline phosphatase, liver/bone/kidney
Database Link:	<u>NP_000469</u> <u>Entrez Gene 11647 MouseEntrez Gene 25586 RatEntrez Gene 249 Human</u> <u>P05186</u>

	Alkaline Phosphatase (ALPL) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI3A1] – TA809117BM
Background:	This gene encodes a member of the alkaline phosphatase family of proteins. There are at least four distinct but related alkaline phosphatases: intestinal, placental, placental-like, and liver/bone/kidney (tissue non-specific). The first three are located together on chromosome 2, while the tissue non-specific form is located on chromosome 1. The product of this gene is a membrane bound glycosylated enzyme that is not expressed in any particular tissue and is, therefore, referred to as the tissue-nonspecific form of the enzyme. Alternative splicing results in multiple transcript variants, at least one of which encodes a preproprotein that is proteolytically processed to generate the mature enzyme. This enzyme may play a role in bone mineralization. Mutations in this gene have been linked to hypophosphatasia, a disorder that is characterized by hypercalcemia and skeletal defects. [provided by RefSeq, Oct 2015]
Synonyms:	AP-TNAP; APTNAP; HOPS; TNAP; TNSALP
Protein Families	: Druggable Genome

Protein Pathways: Folate biosynthesis, Metabolic pathways

Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY ALPL ([RC205692], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-ALPL. Positive lysates [LY400165] (100ug) and [LC400165] (20ug) can be purchased separately from OriGene.
