#### CRIGENE NCF4 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI4B5] – TA809135AM

Background:The protein encoded by this gene is a cytosolic regulatory component of the superoxide-<br/>producing phagocyte NADPH-oxidase, a multicomponent enzyme system important for host<br/>defense. This protein is preferentially expressed in cells of myeloid lineage. It interacts<br/>primarily with neutrophil cytosolic factor 2 (NCF2/p67-phox) to form a complex with<br/>neutrophil cytosolic factor 1 (NCF1/p47-phox), which further interacts with the small G protein<br/>RAC1 and translocates to the membrane upon cell stimulation. This complex then activates<br/>flavocytochrome b, the membrane-integrated catalytic core of the enzyme system. The PX<br/>domain of this protein can bind phospholipid products of the PI(3) kinase, which suggests its<br/>role in PI(3) kinase-mediated signaling events. The phosphorylation of this protein was found<br/>to negatively regulate the enzyme activity. Alternatively spliced transcript variants encoding<br/>distinct isoforms have been observed. Leukocyte transendothelial migration

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY NCF4 (Cat# [RC216094], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-NCF4 (Cat# [TA809135])(1:2000). Positive lysates [LY424600] (100ug) and [LC424600] (20ug) can be purchased separately from OriGene.
