#### **Estrogen Related Receptor alpha (ESRRA) Mouse Monoclonal Antibody (HRP conjugated) [Clone** ID: OTI2H9] – TA809136BM

Background:	The protein encoded by this gene is a nuclear receptor that is closely related to the estrogen receptor. This protein acts as a site-specific transcription regulator and has been also shown to interact with estrogen and the transcripton factor TFIIB by direct protein-protein contact. The binding and regulatory activities of this protein have been demonstrated in the regulation of a variety of genes including lactoferrin, osteopontin, medium-chain acyl coenzyme A dehydrogenase (MCAD) and thyroid hormone receptor genes. A processed pseudogene of ESRRA is located on chromosome 13q12.1. Alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Sep 2013]
Synonyms:	ERR1; ERRa; ERRalpha; ESRL1; NR3B1
Protein Families:	Druggable Genome, Nuclear Hormone Receptor, Transcription Factors

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY ESRRA ([RC209028], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-ESRRA. (1:200) (1:500). Positive lysates [LY417978] (100ug) and [LC417978] (20ug) can be purchased separately from OriGene.
