#### **GRIGENE** MAGEB4 Mouse Monoclonal Antibody [Clone ID: OTI3A6] – TA809181M

Background:This gene is a member of the MAGEB gene family. The members of this family have their<br/>entire coding sequences located in the last exon, and the encoded proteins show 50 to 68%<br/>sequence identity to each other. The promoters and first exons of the MAGEB genes show<br/>considerable variability, suggesting that the existence of this gene family enables the same<br/>function to be expressed under different transcriptional controls. The MAGEB genes are<br/>clustered on chromosome Xp22-p21. This gene sequence ends in the first intron of MAGEB1,<br/>another family member. This gene is expressed in testis. HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY MAGEB4 ([RC206060], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-MAGEB4 (1:2000). Positive lysates [LY419379] (100ug) and [LC419379] (20ug) can be purchased separately from OriGene.
