Background:This gene encodes a protein that belongs to the carcinoembryonic antigen (CEA) family
whose members are glycosyl phosphatidyl inositol (GPI) anchored cell surface glycoproteins.
Members of this family play a role in cell adhesion and are widely used as tumor markers in
serum immunoassay determinations of carcinoma. This gene affects the sensitivity of tumor
cells to adenovirus infection. The protein encoded by this gene acts as a receptor for
adherent-invasive E. coli adhesion to the surface of ileal epithelial cells in patients with
Crohn's disease. This gene is clustered with genes and pseudogenes of the cell adhesion
molecules subgroup of the CEA family on chromosome 19. [provided by RefSeq, Apr 2014]
