ORIGENE	HOXD4 Mouse Monoclonal Antibody [Clone ID: OTI2E8] – TA809473M
----------------	--

Background:This gene belongs to the homeobox family of genes. The homeobox genes encode a highly
conserved family of transcription factors that play an important role in morphogenesis in all
multicellular organisms. Mammals possess four similar homeobox gene clusters, HOXA,
HOXB, HOXC and HOXD, located on different chromosomes, consisting of 9 to 11 genes
arranged in tandem. This gene is one of several homeobox HOXD genes located at 2q31-2q37
chromosome regions. Deletions that removed the entire HOXD gene cluster or 5' end of this
cluster have been associated with severe limb and genital abnormalities. The protein
encoded by this gene may play a role in determining positional values in developing limb
buds. Alternatively spliced variants have been described but their full length nature has not
been determined. [provided by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY HOXD4 ([RC204747], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-HOXD4 (1:2000). Positive lysates [LY415173] (100ug) and [LC415173] (20ug) can be purchased separately from OriGene.
