ORIGENE	HOXD4 Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI1D12] – TA809489BM
---------	---

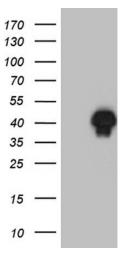

Background:This gene belongs to the homeobox family of genes. The homeobox genes encode a highly<br/>conserved family of transcription factors that play an important role in morphogenesis in all<br/>multicellular organisms. Mammals possess four similar homeobox gene clusters, HOXA,<br/>HOXB, HOXC and HOXD, located on different chromosomes, consisting of 9 to 11 genes<br/>arranged in tandem. This gene is one of several homeobox HOXD genes located at 2q31-2q37<br/>chromosome regions. Deletions that removed the entire HOXD gene cluster or 5' end of this<br/>cluster have been associated with severe limb and genital abnormalities. The protein<br/>encoded by this gene may play a role in determining positional values in developing limb<br/>buds. Alternatively spliced variants have been described but their full length nature has not<br/>been determined. [provided by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY HOXD4 ([RC204747], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-HOXD4 (1:2000). Positive lysates [LY415173] (100ug) and [LC415173] (20ug) can be purchased separately from OriGene.
