### CRIGENE OTX2 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1A1] – TA809511AM

Background:This gene encodes a member of the bicoid subfamily of homeodomain-containing<br/>transcription factors. The encoded protein acts as a transcription factor and plays a role in<br/>brain, craniofacial, and sensory organ development. The encoded protein also influences the<br/>proliferation and differentiation of dopaminergic neuronal progenitor cells during mitosis.<br/>Mutations in this gene cause syndromic microphthalmia 5 (MCOPS5) and combined pituitary<br/>hormone deficiency 6 (CPHD6). This gene is also suspected of having an oncogenic role in<br/>medulloblastoma. Alternative splicing results in multiple transcript variants encoding distinct<br/>isoforms. Pseudogenes of this gene are known to exist on chromosomes two and nine.<br/>[provided by RefSeq, Jul 2012]

Synonyms: CPHD6; MCOPS5

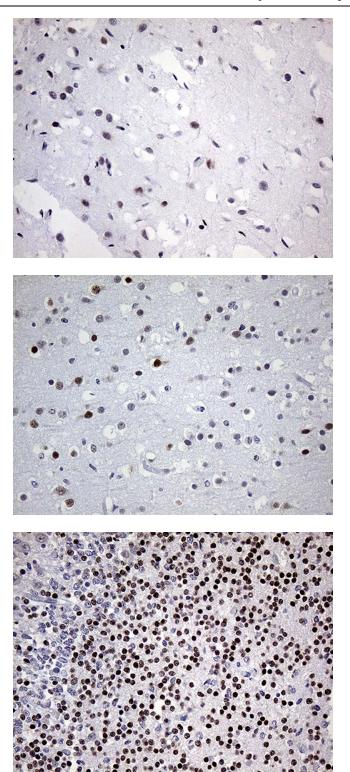

Protein Families:Embryonic stem cells, Induced pluripotent stem cells, Stem cell - Pluripotency, Transcription<br/>Factors

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY OTX2 (Cat# [RC207479], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-OTX2 (Cat# [TA809511])(1:2000). Positive lysates [LY411946] (100ug) and [LC411946] (20ug) can be purchased separately from OriGene.
