### COL5A2 Mouse Monoclonal Antibody [Clone ID: OTI2H3] – TA809611

Background:This gene encodes an alpha chain for one of the low abundance fibrillar collagens. Fibrillar<br/>collagen molecules are trimers that can be composed of one or more types of alpha chains.<br/>Type V collagen is found in tissues containing type I collagen and appears to regulate the<br/>assembly of heterotypic fibers composed of both type I and type V collagen. This gene<br/>product is closely related to type XI collagen and it is possible that the collagen chains of<br/>types V and XI constitute a single collagen type with tissue-specific chain combinations.<br/>Mutations in this gene are associated with Ehlers-Danlos syndrome, types I and II. [provided<br/>by RefSeq, Jul 2008]

Synonyms:	MGC105115

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY COL5A2 (Cat# [RC213335], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-COL5A2 (Cat# TA809611)(1:2000). Positive lysates [LY400138] (100ug) and [LC400138] (20ug) can be purchased separately from OriGene.
