ORIGENE	RRBP1 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI3F1] – TA809626AM
---------	---

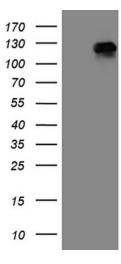

Background:This gene encodes a ribosome-binding protein of the endoplasmic reticulum (ER) membrane.<br/>Studies suggest that this gene plays a role in ER proliferation, secretory pathways and<br/>secretory cell differentiation, and mediation of ER-microtubule interactions. Alternative<br/>splicing has been observed and protein isoforms are characterized by regions of N-terminal<br/>decapeptide and C-terminal heptad repeats. Splicing of the tandem repeats results in<br/>variations in ribosome-binding affinity and secretory function. The full-length nature of<br/>variants which differ in repeat length has not been determined. Pseudogenes of this gene<br/>have been identified on chromosomes 3 and 7, and RRBP1 has been excluded as a candidate<br/>gene in the cause of Alagille syndrome, the result of a mutation in a nearby gene on<br/>chromosome 20p12. HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY RRBP1 (Cat# [RC218816], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-RRBP1 (Cat# [TA809626])(1:2000). Positive lysates [LY420989] (100ug) and [LC420989] (20ug) can be purchased separately from OriGene.
