	Eph receptor A1 (EPHA1) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI2D6] – TA809675BM
Background:	This gene belongs to the ephrin receptor subfamily of the protein-tyrosine kinase family. EPH and EPH-related receptors have been implicated in mediating developmental events, particularly in the nervous system. Receptors in the EPH subfamily typically have a single kinase domain and an extracellular region containing a Cys-rich domain and 2 fibronectin type III repeats. The ephrin receptors are divided into 2 groups based on the similarity of their extracellular domain sequences and their affinities for binding ephrin-A and ephrin-B ligands. This gene is expressed in some human cancer cell lines and has been implicated in carcinogenesis. [provided by RefSeq, Jul 2008]
Synonyms:	EPH; EPHT; EPHT1
Protein Families	: Druggable Genome, Protein Kinase, Transmembrane
Protein Pathway	<b>/s:</b> Axon guidance

### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY EPHA1 ([RC213689], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-EPHA1 (1:500). Positive lysates [LY401608] (100ug) and [LC401608] (20ug) can be purchased separately from OriGene.
