#### PCMT1 Mouse Monoclonal Antibody [Clone ID: OTI2A9] - TA809966M

**Background:** This gene encodes a member of the type II class of protein carboxyl methyltransferase enzymes. The encoded enzyme plays a role in protein repair by recognizing and converting D-aspartyl and L-isoaspartyl residues resulting from spontaneous deamidation back to the normal L-aspartyl form. The encoded protein may play a protective role in the pathogenesis of Alzheimer's disease, and single nucleotide polymorphisms in this gene have been associated with spina bifida and premature ovarian failure. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by RefSeq, Oct 2011]

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY PCMT1 (Cat# [RC200327], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PCMT1 (Cat# [TA809966])(1:2000). Positive lysates [LY432164] (100ug) and [LC432164] (20ug) can be purchased separately from OriGene.

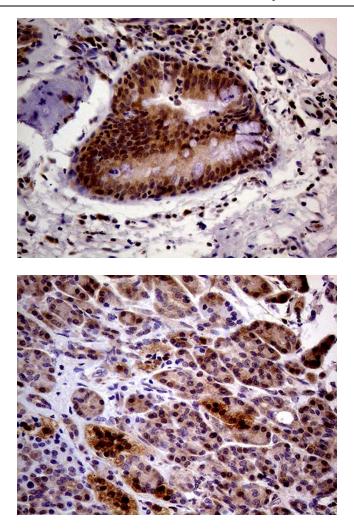

Western blot analysis of extracts (35ug) from 4 different cell lines by using anti-PCMT1 monoclonal antibody (1:500).
