CRIGENE TLR8 Mouse Monoclonal Antibody [Clone ID: OTI3A6] – TA810175

Background: The protein encoded by this gene is a member of the Toll-like receptor (TLR) family which plays a fundamental role in pathogen recognition and activation of innate immunity. TLRs are highly conserved from Drosophila to humans and share structural and functional similarities. They recognize pathogen-associated molecular patterns (PAMPs) that are expressed on infectious agents, and mediate the production of cytokines necessary for the development of effective immunity. The various TLRs exhibit different patterns of expression. This gene is predominantly expressed in lung and peripheral blood leukocytes, and lies in close proximity to another family member, TLR7, on chromosome X. [provided by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY TLR8 ([RC221986], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-TLR8 (1:2000). Positive lysates [LY408461] (100ug) and [LC408461] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 2 different cell lines by using anti-TLR8 monoclonal antibody (1:500).
