Section 2012 CRIGENE PGBD3 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI4G9] – TA810380AM

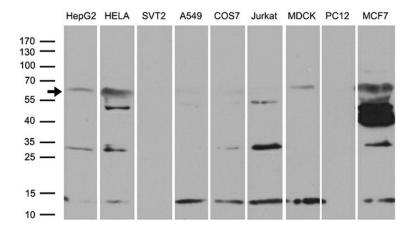

Background:This gene is a member of a small family of genes derived from piggyBac transposable
elements. The encoded protein contains a zinc-ribbon domain characteristic of transposon-
derived proteins and may function as a regulator of transcription. Naturally-occurring
readthrough transcription occurs between this gene and the adjacent ERCC6 gene (GeneID
2074), and results in a fusion protein that shares sequence with the product of each
individual gene. The readthrough locus is represented by GeneID:101243544. There are
several pseudogenes for this gene on chromosomes 4, 5 and 12. [provided by RefSeq, Mar

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY PGBD3 (Cat# [RC208977], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PGBD3 (Cat# [TA810380])(1:2000). Positive lysates [LY406870] (100ug) and [LC406870] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-PGBD3 monoclonal antibody (1:500).
