# Product datasheet for TA810673AM

## E2F5 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI3B7]

## **Product data:**

| Product Type:         | Primary Antibodies  |
|-----------------------|---|
| Clone Name:           | OTI3B7  |
| Applications:         | WB  |
| Recommended Dilution: | WB 1:2000   |
| Reactivity:           | Human, Mouse, Rat   |
| Host:                 | Mouse   |
| lsotype:              | lgG1  |
| Clonality:            | Monoclonal  |
| Immunogen:            | Full length human recombinant protein of human E2F5 (NP_001942) produced in E.coli.                             |
| Formulation:          | PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.  |
| Concentration:        | 0.5 mg/ml   |
| Purification:         | Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)       |
| Conjugation:          | Biotin  |
| Storage:              | Store at -20°C as received.   |
| Stability:            | Stable for 12 months from date of receipt.  |
| Gene Name:            | E2F transcription factor 5  |
| Database Link:        | <u>NP_001942</u><br><u>Entrez Gene 13559 MouseEntrez Gene 116651 RatEntrez Gene 1875 Human</u><br><u>Q15329</u> |

## **GRIGENE** E2F5 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI3B7] – TA810673AM

Background:The protein encoded by this gene is a member of the E2F family of transcription factors. The<br/>E2F family plays a crucial role in the control of cell cycle and action of tumor suppressor<br/>proteins and is also a target of the transforming proteins of small DNA tumor viruses. The<br/>E2F proteins contain several evolutionarily conserved domains that are present in most<br/>members of the family. These domains include a DNA binding domain, a dimerization<br/>domain which determines interaction with the differentiation regulated transcription factor<br/>proteins (DP), a transactivation domain enriched in acidic amino acids, and a tumor<br/>suppressor protein association domain which is embedded within the transactivation<br/>domain. This protein is differentially phosphorylated and is expressed in a wide variety of<br/>human tissues. It has higher identity to E2F4 than to other family members. Both this protein<br/>and E2F4 interact with tumor suppressor proteins p130 and p107, but not with pRB.<br/>Alternative splicing results in multiple variants encoding different isoforms. [provided by<br/>RefSeq, Jul 2008]

| Synonyms:         | E2F-5                                   |
|-------------------|---|
| Protein Families: | Druggable Genome, Transcription Factors |
| Protein Pathways: | Cell cycle, TGF-beta signaling pathway  |

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY E2F5 ([RC224285], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-E2F5 (1:2000). Positive lysates [LY419631] (100ug) and [LC419631] (20ug) can be purchased separately from OriGene.
