| | BRCC36 (BRCC3) Mouse Monoclonal Antibody [Clone ID: OTI6G7] – TA811409 |
|-------------------------|--|
| Background: | This gene encodes a subunit of the BRCA1-BRCA2-containing complex (BRCC), which is an E3 ubiquitin ligase. This complex plays a role in the DNA damage response, where it is responsible for the stable accumulation of BRCA1 at DNA break sites. The component encoded by this gene can specifically cleave Lys 63-linked polyubiquitin chains, and it regulates the abundance of these polyubiquitin chains in chromatin. The loss of this gene results in abnormal angiogenesis and is associated with syndromic moyamoya, a cerebrovascular angiopathy. Alternative splicing results in multiple transcript variants. A related pseudogene has been identified on chromosome 5. [provided by RefSeq, Jun 2011] |
| Synonyms: | BRCC36; C6.1A; CXorf53 |
| Protein Families | : Druggable Genome, Protease |

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY BRCC3 (Cat# [RC200727], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-BRCC3 (Cat# TA811409)(1:500). Positive lysates [LY411291] (100ug) and [LC411291] (20ug) can be purchased separately from OriGene.
