# Product datasheet for TA811723AM

# Factor X (F10) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1D12]

## **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI1D12
Applications:	WB
Recommended Dilution:	WB 1:2000
Reactivity:	Human
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Human recombinant protein fragment corresponding to amino acids 41-488 of human F10 (NP_000495) produced in E.coli.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	0.5 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Biotin
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	54.54 kDa
Gene Name:	coagulation factor X
Database Link:	<u>NP_000495</u> <u>Entrez Gene 2159 Human</u> <u>P00742</u>

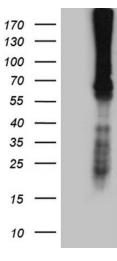

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	Factor X (F10) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1D12] –
	TA811723AM

Background:This gene encodes the vitamin K-dependent coagulation factor X of the blood coagulation<br/>cascade. This factor undergoes multiple processing steps before its preproprotein is<br/>converted to a mature two-chain form by the excision of the tripeptide RKR. Two chains of<br/>the factor are held together by 1 or more disulfide bonds; the light chain contains 2 EGF-like<br/>domains, while the heavy chain contains the catalytic domain which is structurally<br/>homologous to those of the other hemostatic serine proteases. The mature factor is<br/>activated by the cleavage of the activation peptide by factor IXa (in the intrisic pathway), or by<br/>factor VIIa (in the extrinsic pathway). The activated factor then converts prothrombin to<br/>thrombin in the presence of factor Va, Ca+2, and phospholipid during blood clotting.<br/>Mutations of this gene result in factor X deficiency, a hemorrhagic condition of variable<br/>severity. Alternative splicing results in multiple transcript variants encoding different isoforms<br/>that may undergo similar proteolytic processing to generate mature polypeptides. [provided<br/>by RefSeq, Aug 2015]

Synonyms:	FX; FXA
Protein Families:	Druggable Genome, Protease, Transmembrane
Protein Pathways:	Complement and coagulation cascades

### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY F10 ([RC208506], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-F10 (1:2000). Positive lysates [LY400172] (100ug) and [LC400172] (20ug) can be purchased separately from OriGene.
