	ORIGENE ACADM Mouse Monoclonal Antibody [Clone ID: OTI10A5] – TA811764			
Background:	This gene encodes the medium-chain specific (C4 to C12 straight chain) acyl-Coenzyme A dehydrogenase. The homotetramer enzyme catalyzes the initial step of the mitochondrial fatty acid beta-oxidation pathway. Defects in this gene cause medium-chain acyl-CoA dehydrogenase deficiency, a disease characterized by hepatic dysfunction, fasting hypoglycemia, and encephalopathy, which can result in infantile death. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]			
Synonyms:	ACAD1; MCAD; MCADH			
Protein Families:	Druggable Genome			
Protein Pathway	beta-Alanine metabolism, Fatty acid metabolism, Metabolic pathways, PPAR signaling pathway, Propanoate metabolism, Valine, leucine and isoleucine degradation

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY ACADM ([RC202798], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-ACADM (1:2000). Positive lysates [LY400001] (100ug) and [LC400001] (20ug) can be purchased separately from OriGene.

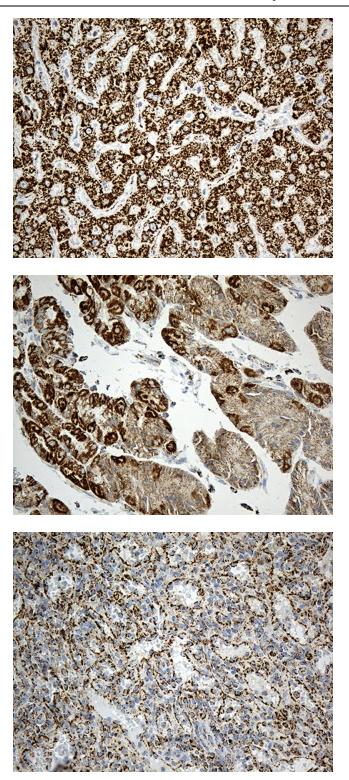

Western blot analysis of extracts (35ug) from 2 different cell lines by using anti-ACADM monoclonal antibody (1:500).
