### CRIGENE ACSL5 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1D4] – TA811872AM

- Background: The protein encoded by this gene is an isozyme of the long-chain fatty-acid-coenzyme A ligase family. Although differing in substrate specificity, subcellular localization, and tissue distribution, all isozymes of this family convert free long-chain fatty acids into fatty acyl-CoA esters, and thereby play a key role in lipid biosynthesis and fatty acid degradation. This isozyme is highly expressed in uterus and spleen, and in trace amounts in normal brain, but has markedly increased levels in malignant gliomas. This gene functions in mediating fatty acid-induced glioma cell growth. Three transcript variants encoding two different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
  Synonyms: ACS2; ACS5; FACL5
  Protein Families: Transmembrane
- Protein Pathways:Adipocytokine signaling pathway, Fatty acid metabolism, Metabolic pathways, PPAR signaling<br/>pathway

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY ACSL5 ([RC213380], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-ACSL5. Positive lysates [LY404321] (100ug) and [LC404321] (20ug) can be purchased separately from OriGene.
