#### **GRIGENE** DDX50 Mouse Monoclonal Antibody [Clone ID: OTI4F7] – TA811893M

Background: DEAD box proteins, characterized by the conserved motif Asp-Glu-Ala-Asp (DEAD), are putative RNA helicases. They are implicated in a number of cellular processes involving alteration of RNA secondary structure such as translation initiation, nuclear and mitochondrial splicing, and ribosome and spliceosome assembly. Based on their distribution patterns, some members of this DEAD box protein family are believed to be involved in embryogenesis, spermatogenesis, and cellular growth and division. This gene encodes a DEAD box enzyme that may be involved in ribosomal RNA synthesis or processing. This gene and DDX21, also called RH-II/GuA, have similar genomic structures and are in tandem orientation on chromosome 10, suggesting that the two genes arose by gene duplication in evolution. This gene has pseudogenes on chromosomes 2, 3 and 4. Alternative splicing of this gene generates multiple transcript variants, but the full length nature of all the other variants but one has not been defined. [provided by RefSeq, Jul 2008]

Equivalent amounts of cell lysates (30 ug per lane) of wild-type HT-1080 cells (WT) and DDX50-Knockdown HT-1080 cells (KD) were separated by SDS-PAGE and immunoblotted with anti-DDX50 monoclonal antibody [TA811893] (1:2500). Then the blotted membrane was stripped and reprobed with anti- $\beta$ -Tubulin antibody as a loading control.

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY DDX50 (Cat# [RC200990], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-DDX50(Cat# [TA811893]). Positive lysates [LY411421] (100ug) and [LC411421] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 4 different cell lines by using anti-DDX50 monoclonal antibody (1:500).
