#### **GRIGENE** UBE1C (UBA3) Mouse Monoclonal Antibody [Clone ID: OTI7H6] – TA811903S

Background:The modification of proteins with ubiquitin is an important cellular mechanism for targeting<br/>abnormal or short-lived proteins for degradation. Ubiquitination involves at least three<br/>classes of enzymes: ubiquitin-activating enzymes, or E1s, ubiquitin-conjugating enzymes, or<br/>E2s, and ubiquitin-protein ligases, or E3s. This gene encodes a member of the E1 ubiquitin-<br/>activating enzyme family. The encoded enzyme associates with AppBp1, an amyloid beta<br/>precursor protein binding protein, to form a heterodimer, and then the enzyme complex<br/>activates NEDD8, a ubiquitin-like protein, which regulates cell division, signaling and<br/>embryogenesis. Multiple alternatively spliced transcript variants encoding distinct isoforms<br/>have been found for this gene. [provided by RefSeq, Jul 2008]

**Protein Pathways:** 

Ubiguitin mediated proteolysis

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY UBA3 (Cat# [RC204675], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-UBA3(Cat# [TA811903]). Positive lysates [LY418315] (100ug) and [LC418315] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 12 different cell lines by using anti-UBA3 monoclonal antibody (1:500).
