**Background:** This gene encodes a member of the guanine nucleotide-binding, or G protein family. G

proteins are heterotrimers consisting of alpha, beta and gamma subunits. The encoded protein is a member of the alpha family of G proteins, more specifically the alpha q subfamily of G proteins. The encoded protein may play a role in pertussis-toxin resistant activation of phospholipase C-beta and its downstream effectors. [provided by RefSeq, Feb 2009]

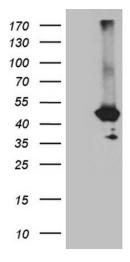

Synonyms: alpha 14; G alpha 14; guanine nucleotide-binding protein 14; guanine nucleotide binding
