# Product datasheet for TA812174M

## HLA-DRB5 Mouse Monoclonal Antibody [Clone ID: OTI4G7]

### **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI4G7
Applications:	IHC, WB
Recommended Dilution:	WB 1:500, IHC 1:150
Reactivity:	Human
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Human recombinant protein fragment corresponding to amino acids 30-266 of human HLA- DRB5 (NP_002116) produced in E.coli.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	1 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	30.06 kDa
Gene Name:	major histocompatibility complex, class II, DR beta 5
Database Link:	<u>NP_002116</u> <u>Entrez Gene 3127 Human</u> <u>Q30154</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2025 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### **GRIGENE** HLA-DRB5 Mouse Monoclonal Antibody [Clone ID: OTI4G7] – TA812174M

Background: HLA-DRB5 belongs to the HLA class II beta chain paralogues. This class II molecule is a heterodimer consisting of an alpha (DRA) and a beta (DRB) chain, both anchored in the membrane. It plays a central role in the immune system by presenting peptides derived from extracellular proteins. Class II molecules are expressed in antigen presenting cells (APC: B lymphocytes, dendritic cells, macrophages). The beta chain is approximately 26-28 kDa and its gene contains 6 exons. Exon one encodes the leader peptide, exons 2 and 3 encode the two extracellular domains, exon 4 encodes the transmembrane domain and exon 5 encodes the cytoplasmic tail. Within the DR molecule the beta chain contains all the polymorphisms specifying the peptide binding specificities. Typing for these polymorphisms is routinely done for bone marrow and kidney transplantation. DRB1 is expressed at a level five times higher than its paralogues DRB3, DRB4 and DRB5. The presence of DRB5 is linked with allelic variants of DRB1, otherwise it is omitted. There are 4 related pseudogenes: DRB2, DRB6, DRB7, DRB8 and DRB9. [provided by RefSeq, Jul 2008]

Synonyms: HLA-DRB

Protein Families: Transmembrane

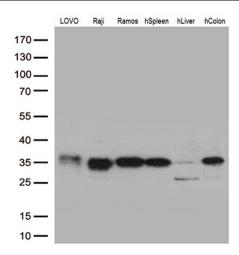

Protein Pathways:Allograft rejection, Antigen processing and presentation, Asthma, Autoimmune thyroid<br/>disease, Cell adhesion molecules (CAMs), Graft-versus-host disease, Hematopoietic cell<br/>lineage, Systemic lupus erythematosus, Type I diabetes mellitus, Viral myocarditis

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY HLA (Cat# [RC203646], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-HLA (Cat# [TA812174]). Positive lysates [LY419520] (100ug) and [LC419520] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 3 cell lines lysates and 3 tissue lysates by using anti-HLA monoclonal antibody (1:500).

Immunohistochemical staining of paraffinembedded Human lymphoma tissue using anti-HLA mouse monoclonal antibody. Heat-induced epitope retrieval by EDTA solution buffer pH 8.0 at 120°C for 3 min.

Immunohistochemical staining of paraffinembedded Human spleen tissue within the normal limits using anti-HLA mouse monoclonal antibody. Heat-induced epitope retrieval by EDTA solution buffer pH 8.0 at 120°C for 3 min.
