

Product datasheet for TA812200S

CIITA Mouse Monoclonal Antibody [Clone ID: OTI7B12]

Product data:

Product Type:	Primary Antibodies
Clone Name:	OTI7B12
Applications:	WB
Recommended Dilution:	WB 1:500
Reactivity:	Human
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Human recombinant protein fragment corresponding to amino acids 414-724 of human CIITA (NP_000237) produced in E.coli.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	1 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	123.2 kDa
Gene Name:	class II, major histocompatibility complex, transactivator
Database Link:	<u>NP_000237</u> <u>Entrez Gene 4261 Human</u> <u>P33076</u>

GRIGENE CIITA Mouse Monoclonal Antibody [Clone ID: OTI7B12] – TA812200S

Background:This gene encodes a protein with an acidic transcriptional activation domain, 4 LRRs (leucine-
rich repeats) and a GTP binding domain. The protein is located in the nucleus and acts as a
positive regulator of class II major histocompatibility complex gene transcription, and is
referred to as the 'master control factor' for the expression of these genes. The protein also
binds GTP and uses GTP binding to facilitate its own transport into the nucleus. Once in the
nucleus it does not bind DNA but rather uses an intrinsic acetyltransferase (AT) activity to act
in a coactivator-like fashion. Mutations in this gene have been associated with bare
lymphocyte syndrome type II (also known as hereditary MHC class II deficiency or HLA class
II-deficient combined immunodeficiency), increased susceptibility to rheumatoid arthritis,
multiple sclerosis, and possibly myocardial infarction. Several transcript variants encoding
different isoforms have been found for this gene. [provided by RefSeq, Nov 2013]

Synonyms: C2TA; CIITAIV; MHC2TA; NLRA

Protein Pathways: Antigen processing and presentation, Primary immunodeficiency

Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY CIITA (Cat# [RC222253], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CIITA (Cat# [TA812200])(1:500). Positive lysates [LY424845] (100ug) and [LC424845] (20ug) can be purchased separately from OriGene.
