Sim (BCL2L11) Mouse Monoclonal Antibody [Clone ID: OTI2H5] – TA812441M

Background:The protein encoded by this gene belongs to the BCL-2 protein family. BCL-2 family members
form hetero- or homodimers and act as anti- or pro-apoptotic regulators that are involved in
a wide variety of cellular activities. The protein encoded by this gene contains a Bcl-2
homology domain 3 (BH3). It has been shown to interact with other members of the BCL-2
protein family and to act as an apoptotic activator. The expression of this gene can be
induced by nerve growth factor (NGF), as well as by the forkhead transcription factor FKHR-
L1, which suggests a role of this gene in neuronal and lymphocyte apoptosis. Transgenic
studies of the mouse counterpart suggested that this gene functions as an essential initiator
of apoptosis in thymocyte-negative selection. Several alternatively spliced transcript variants
of this gene have been identified. [provided by RefSeq, Jun 2013]

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY BCL2L11 (Cat# [RC207559], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-BCL2L11 (Cat# [TA812441])(1:500).
