# Product datasheet for TA812507AM

# LDL Receptor (LDLR) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI4E9]

## **Product data:**

Product Type:	Primary Antibodies	
Clone Name:	OTI4E9	
Applications:	WB	
Recommended Dilution:	WB 1:2000	
Reactivity:	Human	
Host:	Mouse	
lsotype:	lgG1	
Clonality:	Monoclonal	
Immunogen:	Full length human recombinant protein of human LDLR (NP_000518) produced in HEK293T cell.	
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.	
Concentration:	0.5 mg/ml	
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)	
Conjugation:	Biotin	
Storage:	Store at -20°C as received.	
Stability:	Stable for 12 months from date of receipt.	
Predicted Protein Size:	95.38 kDa	
Gene Name:	low density lipoprotein receptor	
Database Link:	<u>NP_000518</u> <u>Entrez Gene 3949 Human</u> <u>P01130</u>	

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	LDL Receptor (LDLR) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI4E9] – TA812507AM	
Background:	The low density lipoprotein receptor (LDLR) gene family consists of cell surface proteins involved in receptor-mediated endocytosis of specific ligands. Low density lipoprotein (LDL) is normally bound at the cell membrane and taken into the cell ending up in lysosomes where the protein is degraded and the cholesterol is made available for repression of microsomal enzyme 3-hydroxy-3-methylglutaryl coenzyme A (HMG CoA) reductase, the rate-limiting step in cholesterol synthesis. At the same time, a reciprocal stimulation of cholesterol ester synthesis takes place. Mutations in this gene cause the autosomal dominant disorder, familial hypercholesterolemia. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Sep 2010]	
Synonyms:	FH; FHC; FHCL1; LDLCQ2	
Protein Families:	Druggable Genome, ES Cell Differentiation/IPS, Transmembrane	
Protein Pathway	Endocytosis

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY LDLR ([RC200006], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-LDLR (1:2000). Positive lysates [LY400183] (100ug) and [LC400183] (20ug) can be purchased separately from OriGene.
