Product datasheet for TA812510AM

LDL Receptor (LDLR) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI7C5]

Product data:

| Product Type: | Primary Antibodies | |
|-------------------------|--|--|
| Clone Name: | OTI7C5 | |
| Applications: | FC, WB | |
| Recommended Dilution: | WB 1:500~2000, FLOW 1:100 | |
| Reactivity: | Human | |
| Host: | Mouse | |
| lsotype: | lgG1 | |
| Clonality: | Monoclonal | |
| Immunogen: | Full length human recombinant protein of human LDLR (NP_000518) produced in HEK293T cell. | |
| Formulation: | PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide. | |
| Concentration: | 0.5 mg/ml | |
| Purification: | Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G) | |
| Conjugation: | Biotin | |
| Storage: | Store at -20°C as received. | |
| Stability: | Stable for 12 months from date of receipt. | |
| Predicted Protein Size: | 95.38 kDa | |
| Gene Name: | low density lipoprotein receptor | |
| Database Link: | <u>NP_000518</u> <u>Entrez Gene 3949 Human</u> <u>P01130</u> | |

| | LDL Receptor (LDLR) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI7C5] – TA812510AM |
|------------------------------|---|
| Background: | The low density lipoprotein receptor (LDLR) gene family consists of cell surface proteins involved in receptor-mediated endocytosis of specific ligands. Low density lipoprotein (LDL) is normally bound at the cell membrane and taken into the cell ending up in lysosomes where the protein is degraded and the cholesterol is made available for repression of microsomal enzyme 3-hydroxy-3-methylglutaryl coenzyme A (HMG CoA) reductase, the rate-limiting step in cholesterol synthesis. At the same time, a reciprocal stimulation of cholesterol ester synthesis takes place. Mutations in this gene cause the autosomal dominant disorder, familial hypercholesterolemia. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Sep 2010] |
| Synonyms: Protein Familie | FH; FHC; FHCL1; LDLCQ2 s: Druggable Genome, ES Cell Differentiation/IPS, Transmembrane |

Endocytosis

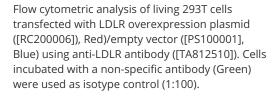

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY LDLR (Cat# [RC200006], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-LDLR (Cat# [TA812510])(1:2000). Positive lysates [LY400183] (100ug) and [LC400183] (20ug) can be purchased separately from OriGene.
